Course Title: Software Processes

Course Code: SPS611S

GROUP Project (6/7 members per group)
Due Date: Sunday, 23 March 2024
Due Time: 23H59
Projects Structure/Schedule:

- A 10min Presentation Mandatory
- Documentation and Implementation

Total Marks: 100 Marks

<u>This is part of your Semester Project and expects the following tasks to be carried out:</u>

1. Perform a system investigation and analyze the system to determine the requirements (operational, functional, hardware, software, input, process, output, etc.) for such a system.

2. Document the requirements and specifications in a file using Microsoft Word/Overleaf and a mainstream requirements management tool (example: ReQtest). You may decide to include additional information as applicable and any diagrams that will help in the analysis. Save the software requirements specification document as a PDF file.

3. Upload your SRS document on E-Learning/Moodle and submit a hard copy of the requirements specification file to the lecturer by the due date.

4. A 10min Presentation

Instructions to Students

a) The project contributes 40% to your final semester mark.
b) Please feel free to contact your lecturer if you have any questions or problems regarding the project.
c) The project is to be completed in groups (6/7 students).
d) Please indicate the [Student Number], [First Name], and [Last Name] of all Project Team members.
e) If students are found to have <u>plagiarised</u>, this is a crime, serious actions will be taken. (please refer to the Course Outline).
f) All projects should be submitted through Turnitin, the similarity software that is integrated into the E-Learning Management System. If plagiarism is detected, marks will be deducted as follows:

% Similarity	% Marks Deducted
0 – 20	0
21 – 40	10
41 - 60	25
61 - 100	100

It is the student's responsibility to be familiar with and adhere to the NUST's Policies. These Policies can be found in the NUST Prospectus or online at:
https://www.nust.na/sites/default/files/documents/eYearbook_P4_ComputingandInformatics.pdf

Project Deliverables: Scoring Rubric for Group Project

Group Members: _____ _____

_____ _____

_____ _____

CRITERIA	PERFORMANCE LEVELS					Marks Awarded
	Excellent 4	**Very Good 3**	**Average 2**	**Poor 1**	**Unaceptable 0**	
Requirement elicitation	Excellent exploration of the problem space and defining what will be designed and implemented. Excellent data gathering techniques applied.	Demonstrated very good exploration of the problem space and defining what will be designed. Very good data gathering techniques applied.	Demonstrated average exploration of the problem space and defining what will be designed. Average data gathering techniques applied.	Poor exploration of the problem space and defining what will be designed. Data gathering techniques at the beginning level.	Unaceptable exploration of the problem space and defining what will be designed. No data gathering techniques shown.	
System Requirement Specifications (SRS): -Intended audience -Product Scope -Functional/Non-functional Requirements -Constraints -Inerface -System Features	Excellent documentation of the system requiremnts specification.	Very good documentation of the software requiremnts specification.	Average documentation of the software requiremnts specification.	Poor documentation of the software requiremnts specification.	Unaceptable documentation of the software requiremnts specification.	

Choose appropriate tools and methods for task (techniques)	Excellent application and use of appropriate tools.	Good application and use of appropriate tools.	Minimal application and use of appropriate tools.	Poor application and use of appropriate tools.	Serious deficiencies in understanding the correct selection and/or use of tools.	
Create well documented set of life cycle products specific to the project	Sound conclusions reached based on achieved results of life cycle products specific to the project.	Good in support for stated conclusions of life cycle products specific to the project.	Average conclusions based on achieved results of life cycle products specific to the project.	Poor or erroneous conclusions based on achieved results of life cycle products specific to the project.	No or erroneous conclusions based on achieved results of life cycle products specific to the project.	
Quality of Software Processes and Software Process Models	Excellent Evidence of Quality of Software Processes and Software Process Models used.	Good Evidence of Quality of Software Processes and Software Process Models used.	Average Evidence of Quality of Software Processes and Software Process Models used.	Poor Evidence of Quality of Software Processes and Software Process Models used.	No Evidence of Quality of Software Processes and Software Process Models used.	
Group Presentation	Excellent and effective application of Software Design principles resulting in reasonable solution. Demonstration of full knowledge through explanations and elaboration were excellent.	Good proper selection and use of Software Design principles. Demonstration of full knowledge through explanations and elaboration were very good.	Average in proper selection and use of Software Design principles. Demonstration of full knowledge through explanations and elaboration were average.	Poor or Serious deficiencies in proper selection and use of Software Design principles. Demonstration of full knowledge through explanations and elaboration were poor.	Unaceptable or no application of Software Design principles yielding unreasonable solution. Demonstration of full knowledge through explanations and elaboration were unaceptable.	
TOTAL MARKS						100
