Activity 1: What is Software Verification and Validation (SVV)?

To fully grasp Software Verification and Validation (SVV), it is important to think beyond definitions and understand how it applies in real-world scenarios. Instead of simply defining SVV, this activity challenges you to illustrate or describe it using a scenario or drawing.

Activity Structure:

1. **Individual Brainstorming:**
   - Take a few minutes to answer the question: *What is SVV?*
   - Illustrate your understanding using a drawing or scenario rather than a definition.
   - Keep it brief—this step is just to activate your thinking.

2. **Group Discussion:**
   - You will be assigned to larger groups (more than five members).
   - Discuss and refine your individual ideas into a shared group perspective.

3. **Group Presentation:**
   - Each group will select a representative(s) to present their findings.
   - The goal is to clearly explain SVV so that everyone understands.

4. **Class Interaction:**
   - Students are encouraged to ask questions and challenge each other's ideas.

5. **Lecturer-Led Discussion:**
   - The lecturer will guide discussions, provide insights, and connect your ideas to key SVV concepts.

This activity is designed to help you think critically about SVV and understand its practical significance. Let’s make it engaging and insightful! 🚀
