1. Evidence Must Be Collected Throughout the Process

Evidence is not something you add at the end of the report. You are expected to collect and document evidence **continuously**, from the first client contact until submission.

This includes evidence for:

- Client engagement
- Requirement elicitation
- Requirement verification
- Initial validation planning

2. Types of Acceptable Evidence

You are expected to provide **primary and traceable evidence**, such as:

✓ Client Interaction Evidence

- Formal meeting minutes (with date, attendees, agenda, decisions)
- Email communication with the client
- Signed confirmation notes (where possible)
- Interview transcripts or structured summaries

✓ Observation and Context Evidence

- Photographs from site visits (where permitted)
- Screenshots of existing systems
- Copies of current forms, reports, or manuals

✓ Requirement Evidence

- Annotated requirement lists showing source
- Traceability tables linking requirements to evidence
- Highlighted excerpts from interviews supporting each requirement

3. Evidence Must Be Referenced in the Report

Do NOT attach evidence without using it.

Every piece of evidence must be:

- Clearly labeled (e.g., *Appendix A: Meeting Minutes – 12 Feb 2026*)
- Explicitly referenced in the main text
- Directly linked to specific requirements or decisions

Example:

“Requirement FR-03 was derived from the client interview conducted on 12 February 2026 (see Appendix B).”

4. Avoid Unsupported Statements

Do NOT write:

- “The client wants…”
- “It was agreed that…”
- “The system must…”

Unless you can immediately show:

- When it was discussed
- With whom
- Where it is documented

Every statement must have an evidence trail.

5. Evidence Quality Matters

Weak evidence weakens your entire submission.

Avoid:

- Unclear photos
- Unlabeled screenshots
- Informal notes
- Evidence without dates or names
- Evidence that cannot be verified

Evidence must be:

- Clear
- Professional
- Organised
- Auditable

6. Traceability Is a Requirement

You are expected to demonstrate traceability:

- Client statement → Requirement
- Requirement → Evidence

- Requirement → Verification activity
- Requirement → Planned validation method

This shows that your work follows SVV principles.

7. Ethical and Professional Conduct

- Always ask permission before recording or taking photos
- Respect confidentiality agreements
- Do not fabricate or exaggerate evidence
- Do not reuse evidence from other projects

Academic misconduct related to evidence will be treated seriously.

8. Evidence Determines Marks

Marks will be significantly affected by:

- Missing evidence
- Poorly referenced evidence
- Claims without proof
- Generic or fabricated documentation

A well-written report **without evidence will not score well**.

Key Reminder

Software is verified with facts, not opinions.
Validation relies on proof, not assumptions.
